

## Why our SS is Superior!...

### 1. Robotically Welded Sides

Sides of the T-91-SS are constructed of only four pieces: A single sheet of premium 5/32" aluminum, 10<sup>3</sup>/<sub>4</sub>" extruded top rail, 4" extruded longitudinal rib and extruded front and rear post. These pieces are robotically welded which assures that every side receives a consistent solid continuous weld. Our sides have a smooth, eye-catching appearance and are very reliable.

### 2. Panted Lower Rail

The T-91-SS has a 13" patented lower rail. This extremely large rail gives Vantage superior strength and prevents floor sag in later years.

### 3. Tapered Body Design

The floor is 6" wider at the rear of the T-91-SS. This allows all loads to slide easily throughout the entire length of the trailer from a narrower to a wider opening. No-clog dumping means increased profits plus it provides an additional safety margin over conventional trailers.
