

VACUUM PUMP SYSTEM TRAINING

Truck Center of Fort Worth, Inc. is pleased to offer our customers free basic pump operation and maintenance training classes, designed for your drivers, mechanics, safety and operations, and owners.

The purpose of this free training is to answer questions about the proper use of a typical vacuum system, including the pump and trailer, offer insight and ideas for lowering the operational costs of your equipment and increasing the life cycle of the pumps.

We will cover issues such as:

- ◆ The importance of operating at the correct pump speed, and how to achieve that speed
- ◆ Coupling and mounting
- ◆ Oil levels and consumption
- ◆ Troubleshooting the pump
- ◆ Preventive Maintenance
- ◆ Basic tank and scrubber system operation and maintenance

With the initial purchase cost of a typical pump system, combined with the operational costs and down time caused by a lack of maintenance, we truly believe that this free class is a must for anyone running vacuum trucks and trailers and vacuum pump systems.

Contact us at 1-800-709-3184 or via email at mporter@fortworthtruck.com (reference "pump training") and we will work to get a class scheduled for you.
